Member, Saudi Council of Engineers (SCE) | Born 1999

PROFESSIONAL SUMMARY

Results-driven Senior Cloud Migration Engineer and Cloud Solutions Professional with experience delivering enterprise cloud transformation initiatives across multi-cloud environments. Currently with Alibaba Cloud, supporting organizations in cloud adoption, workload migration, infrastructure modernization, and cloud architecture implementation.

Experienced in designing secure, scalable, and resilient cloud environments across AWS, Alibaba Cloud, and Multi cloud-native platforms. Skilled in cloud migration strategies, Kubernetes platforms, Infrastructure as Code, DevOps automation, cloud networking, security architecture, and operational excellence.

Recognized for translating business requirements into cloud solutions that improve scalability, reliability, security, and cost efficiency while accelerating digital transformation initiatives. Holder of AWS Solutions Architect Professional and CKAD certifications with strong expertise in cloud architecture principles, cloud operations, migration frameworks, and modern platform engineering practices.

PROFESSIONAL EXPERIENCE

Cloud Migration Engineer | EZSVS (Alibaba Group partner) — Alibaba Cloud

Apr 2026 – Present | Riyadh, KAFD, Saudi Arabia

- **Azure to Alibaba Cloud migration:** Leading the move of a global enterprise from Azure to Alibaba Cloud in Shanghai. I own the multi-VPC landing zone, the IPsec VPN back to Azure, ACK with Linux and Windows node pools, ACR, SAE, Function Compute, NAS, and the DTS database migration from Azure SQL MI to RDS SQL Server.
- **Private GenAI platform:** Leading the Tongyi Lingma rollout for a UAE enterprise, taking it from an air-gapped PoC to production on ACK Pro with Lingjun NVIDIA H20 GPU nodes. Found the root cause of an image-handling defect in the product.
- **Data warehouse migration:** Ran BigQuery to MaxCompute migrations for a KSA fintech using MMS. Validated type mappings across 24 mismatch tables and caught silent data-loss issues the tool doesn't report, such as dropped columns and values written as NULL on overflow.
- **Serverless modernization:** Designed the move from Google Cloud Run to Function Compute, including sizing, a multi-AZ front end with Anti-DDoS Pro, WAF and ALB, and IPsec VPN connectivity back to GCP.
- **Identity & governance:** Designed single sign-on from Microsoft Entra ID and JumpCloud into Alibaba Cloud with CloudSSO (SAML 2.0 and SCIM 2.0), across Resource Directory multi-account setups.
- **Network security & DR:** Designed hub-and-spoke traffic inspection with FortiGate HA on CEN Transit Router, plus the network foundation for customer disaster recovery projects.
- **Riyadh region & data residency:** Led a production build in the Riyadh region from an empty account to a live site on ECS, multi-zone RDS for MySQL, WAF 3.0, OSS and RAM. Designed an SLS-based SIEM that keeps all log data inside the Kingdom.
- **ACK & operations:** Brought a fully broken ACK cluster back to life by fixing a CCM route-table failure, a blocking node-pool taint and expired ACR credentials. I also handle Cloud Backup (HBR), SMC server migrations, and RDS AD changes through OpenAPI when the console can't make them.
- **Performance tuning:** Tested BBR against CUBIC for a data migration from US Virginia to China and got 116x faster single-stream throughput.

Cloud Infrastructure Engineer | Najmat Al-Khaleej IT Services

Jan 2025 – Jan 2026 | Saudi Arabia

- Designed and implemented scalable, secure cloud architectures aligned with AWS best practices
- Evaluated existing systems and recommended modernization and re-architecture strategies
- Managed day-to-day cloud operations, including provisioning, monitoring, backups, and incident resolution
- Built and automated infrastructure using Terraform (IaC)
- Deployed and managed containerized workloads using Kubernetes (EKS-oriented)
- Implemented monitoring and alerting using CloudWatch, improving observability
- Designed and configured cloud networking (VPCs, subnets, routing, load balancing)

- Applied IAM policies and security best practices to ensure compliance and protection
- Optimized infrastructure for performance, scalability, and cost efficiency
- Supported cloud migration initiatives from traditional environments to AWS
- Maintained architecture diagrams, documentation, runbooks, and SOPs

Independent Cloud Solutions Architect | Freelance

Mar 2023 – Jan 2025 | Remote

- Designed end-to-end cloud architectures and solution blueprints for cloud-native applications
- Built and managed multi-cloud-ready environments (AWS-focused, Azure-aware)
- Implemented Infrastructure as Code (Terraform) for automated provisioning
- Developed CI/CD pipelines to streamline application deployment
- Containerized applications using Docker and deployed on Kubernetes clusters
- Structured systems for high availability, resilience, and scalability
- Conducted performance tuning, troubleshooting, and system optimization
- Provided technical guidance and best practices for cloud adoption and operations

CERTIFICATIONS

- AWS Certified Solutions Architect - Professional
- Certified Kubernetes Application Developer (CKAD)
- AWS Certified Developer – Associate
- AWS Certified Solutions Architect – Associate
- Google Cloud Essentials

TECHNICAL SKILLS

Alibaba Cloud: ECS, VPC, CEN Transit Router, ACK and ACK Pro, ACR, SAE, Function Compute, RDS, DTS, MaxCompute, OSS, NAS, WAF, Anti-DDoS Pro, CloudSSO, Resource Directory, SLS, Cloud Backup (HBR), SMC, Lingjun, OpenAPI

AWS: EKS, Lambda, API Gateway, DynamoDB, S3, SQS, SNS, EventBridge, CloudWatch, IAM, CloudFormation

Azure and Google Cloud: Azure SQL MI, Azure Functions, Cosmos DB, Entra ID, Cloud Run, BigQuery

Containers and orchestration: Kubernetes (CKAD), Docker, kubectl, microservices, cloud-native deployment

Automation and CI/CD: Terraform, Infrastructure as Code, GitHub Actions, CI/CD pipelines, DevOps automation

Networking and security: Landing zone design, hybrid connectivity, IPsec VPN, FortiGate, DNS and load balancing, network segmentation, IAM and RBAC, SAML 2.0, SCIM 2.0

Operations: Monitoring and observability, incident management, backup and disaster recovery, cost optimization, capacity planning

Platforms and scripting: Linux, Python, Bash

SELECTED PERSONAL PROJECTS

Public repositories at github.com/omer-taha-ahmed

- **Event-driven task queue (AWS):** Producer and consumer task processing built entirely in Terraform on SQS, SNS, EventBridge, DynamoDB and Lambda.
- **Serverless chatbot (AWS):** Conversational assistant on Amazon Lex with Lambda and API Gateway, keeping session state in DynamoDB.
- **Game leaderboard (AWS and Azure):** The same real-time scoring service built twice, on Lambda with DynamoDB and on Azure Functions with Cosmos DB.

EDUCATION

Bachelor of Science in Electrical Engineering

Sudan University of Science and Technology | 2025

LANGUAGES & others

- Arabic – Native
- English – Proficient
